

Gas Receiving Stations

Supply of integrated customized solutions
Supporting of installation & operation globally

- International EPC contractor in the Oil & Gas market - 20 years of experience in designing & manufacturing of all types of Gas Treatment Systems including metering, filtering, heating, pressure and flow controlling, proving & calibrating configurations for gas fuels
- Full compliance to all international regulatory frameworks & standards as well as with custody transfer regulations
- In-house engineering capable to conform to any international technical norm & specification
- Project management securing qualitative & "on time" delivery
- Highest grade of in-shop pre-fabrication
- Factory acceptance test procedures ensuring the highest performance
- Installation on site services including commissioning & start-up and repairs

Providing Gas Stations

Installed indoors/outdoors at site or mobile (trailer-mounted) including:

- Inlet /Outlet ESD systems
- Gas Filtering and Phase Separating Pressure Vessels and Skids
- Metering Systems for Custody Transfer Purposes
- Heating Units including Heat Exchangers or Water Bath Heaters
- Regulating Skids
- Fuel Gas / Auxiliary / Hot Water Boiler Skids
- Automation Systems with Control Cabinet/ Supervisory system

Technical Features for Units

Application: Power Plants, Distribution / Border Stations
Type: Metering / Regulating
Standards: API, ASME, TEMA
Fluid: Natural Gas
Material of construction: Carbon steel, stainless steel, low temperature carbon steel
Design temperatures: -29 °C to 60°C
Design pressure: ANSI CLASS 150/300/600/900/2500
Control: Local and/or Remote

Gas Receiving STATIONS

Examples of our experience

GRS station Arab Potash
Jordan

GRS station Hassi II
Algeria

LNG GRS station
Malta
